Kerto® LVL

Design values

Design values for Kerto LVL products are given in tables 1 and 2. The values are according standard EN 14374 and are to be used for structural calculations with EN 1995 (Eurocode 5). Definitions of strength and stiffness orientations are presented in figure 1. Veneer lay-ups for Q-panel, L-panel and Qp-beam are presented in tables 7 and 8.

TABLE 1. THE CHARACTERISTIC STRENGTH VALUES FOR KERTO LVL PRODUCTS

Property	Symbol	Figure 1	S-beam 27-75 mm	T-stud 27-75 mm	Qp-beam 39-51 mm	Qp-beam 54-75 mm
Fullfils strength class			**LVL 48 P**	**LVL 32 P**		
Characteristic values [N/mm²]						
Bending strength: Edgewise (depth 300 mm)	$f_{m,0,edge,k}$	A	44.0	27.0	36.0	38.0
Bending strength: Size effect parameter	s	-	0.12	0.15	0.12	0.12
Bending strength: Flatwise, parallel to grain	$f_{m,0,flat,k}$	B	50.0	32.0	36.0	36.0
Bending strength: Flatwise, perpendicular to grain	$f_{m,90,flat,k}$	C	-	-	-	-
Tensile strength: Parallel to grain (length 3,000 mm)	$f_{t,0,k}$	D	35.0	22.0	28.0	30.0
Tensile strength: Perpendicular to grain, edgewise	$f_{t,90,edge,k}$	E	0.8	-	3.0	2.5
Tensile strength: Perpendicular to grain, flatwise	$f_{t,90,flat,k}$	F	-	-	-	-
Compressive strength: Parallel to grain	$f_{c,0,k}$	G	35.0[1]	26.0[1]	28.0[1]	30.0[1]
Compressive strength: Perpendicular to grain, edgewise	$f_{c,90,edge,k}$	H	6.0	4.0	6.0	6.0
Compressive strength: Perpendicular to grain, flatwise	$f_{c,90,flat,k}$	I	2.2	0.8	1.8	1.8
Shear strength: Edgewise	$f_{v,0,edge,k}$	J	4.2	3.6	4.1	4.1
Shear strength: Flatwise, parallel to grain	$f_{v,0,flat,k}$	K	2.3	2.0	1.3	1.3
Shear strength: Flatwise, perpendicular to grain	$f_{v,90,flat,k}$	L	-	-	-	-

[1] In the service class 2 the values 28.0 N/mm² and 30.0 N/mm² is recommended to be divided by 1.2

Partial factor for the material

Kerto LVL partial factor $\gamma_M = 1.2$

NOTE.

Defined separately in National Annex for each country, 1.2 is the recommended value in the standard EN 1995-1-1.

Design factors

Moisture content of the product, load duration, and effect of deformations shall be taken into account in structural design. Modification factor for duration of load and moisture content k_{mod} and deformation factor k_{def} are presented in tables 9 and 10 as given in Eurocode 5.

NOTE.

Changes in moisture content may cause relatively large deformations in wood products and increase creep.

TABLE 9. MODIFICATION FACTOR FOR DURATION OF LOAD AND MOISTURE CONTENT k_{mod}

	PERMANENT ACTION	LONG TERM ACTION	MEDIUM TERM ACTION	SHORT TERM ACTION	INSTANTANEOUS ACTION

Source: EN 1995-1-1 and Laminated veneer lumber (LVL) bulletin, New European strength classes, September 2020

Size effect parameter

The effect of member size on edgewise bending strength and tensile strength parallel to grain shall be taken into account in structural design. This is made by factors k_h and k_l which are given below as defined in Eurocode 5. The formulas include size parameter s which is product specific. Size effect parameters for different Kerto LVL products are given in tables 1 and 2.

$$k_h = \min \begin{cases} 1.2 \\ \left(\frac{300}{h}\right)^s \end{cases}$$ for members subjected to edgewise bending

$$k_l = \min \begin{cases} 1.1 \\ \left(\frac{3000}{l}\right)^{\frac{s}{2}} \end{cases}$$ for members subjected to tension parallel to grain

h = depth of the member
l = length of the member

EXAMPLE:

Design edgewise bending strength $f_{m,d}$ for S-beam
- h = 400 mm
- Service Class 1
- medium term action.

$$f_{m,d} = k_h \cdot \frac{k_{mod}}{\gamma_M} \cdot f_{m,k} = \min\left(1.2; \left(\frac{300mm}{400mm}\right)^{0.12}\right) \cdot \frac{0.8}{1.2} \cdot 44\,\frac{N}{mm^2} = 28.3\,N/mm^2$$

$f_{m,d}$ = design bending strength
$f_{m,k}$ = characteristic bending strength
k_h = depth factor
k_{mod} = modification factor for duration of load and moisture content
g_M = partial factor for material properties

Compression perpendicular to the grain

According to Eurofins statement No EUFI29-23001225-T2 in design of compression perpendicular to the grain, the contact length of Kerto LVL products can be increased as specified in table 11. Furthermore, the coefficient $k_{c,90}$ according to table 11 can be used.

TABLE 11. COMPRESSION PERPENDICULAR TO THE GRAIN PARAMETERS OF S-BEAM, Q-PANEL AND QP-BEAM FOR THE DESIGN METHOD OF CLAUSE 6.1.5 OF EUROCODE 5.

Compression	$f_{c,90,k}$ N/mm²	Increasing of contact lenght [1]	$k_{c,90}$ [2] (a)	$k_{c,90}$ [2] (b)
S-beam, edgewise	6.0	15 mm along	1.0	≤ 1.2 [4]
S-beam, flatwise [3]	2.2	30 mm along 15 mm across	1.4	1.6
Q-panel, edgewise	9.0	15 mm along	1.0	1.0
Q-panel, flatwise [3]	2.2	30 mm along 15 mm across	1.4	1.6
Qp-beam, edgewise	6.0	15 mm along	1.0	≤ 1.2 [4]
Qp-beam, flatwise [3]	1.8	30 mm along 15 mm across	1.4	1.6

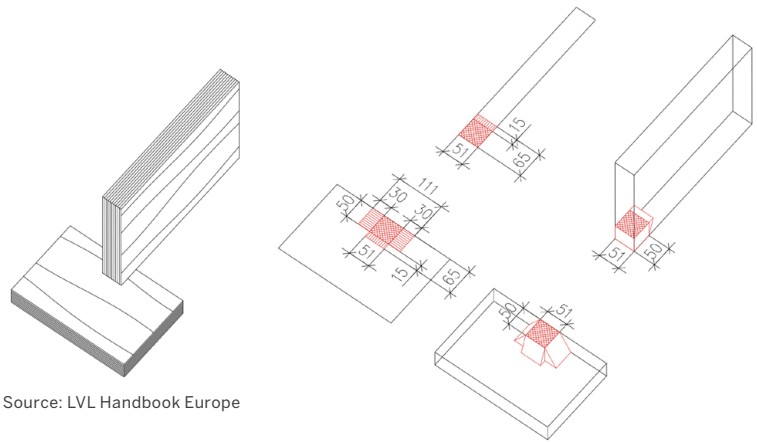
1) For the effective contact length, the actual contact length is increased at each side by this distance, but not more than a, l or $l_1/2$ according to Eurocode 5.
Along = contact length parallel to the grain direction of face veneers.
Across = contact length perpendicular to the grain direction of face veneers.

2) Member on (a) continuous or (b) discrete supports provided that $l_1 \geq 2h$ according to Eurocode 5.

3) When a compression deformation up to 20% is accepted for thicknesses less than 45 mm.

4) For S-beam and Qp-beam edgewise at discrete supports (b):

$$k_{c,90} = \begin{cases} 1.2 & l < 100mm \\ 1.4 - l/500 & 100mm \leq l \leq 200mm \\ 1.0 & l > 200mm \end{cases}$$



Source: LVL Handbook Europe

Factor for notched members

Standard EN 1995-1-1 (equation 6.63) gives factor k_n = 4,5 for LVL.
According to certificate Eurofins EUFI29-20000676-C,
the following factors can be used for Kerto LVL:

- k_n = 6 S-beam edgewise
- k_n = 16 Q-panel edgewise

Reduction factor for various load angles
